## IN THE CLAIMS:

Please amend the CLAIMS as follows.

## 1-9. (CANCELLED).

10. (Currently Amended) In combination, a universal extra shade tent structure and hand held umbrella, comprising:

a hand held umbrella which has a frame assembly including a hand held lever with a handle which is configured to be held by a hand of a user, and a plurality of umbrella arms which extend outwardly radially and downward from a distal end of the hand held lever which is spaced from the handle of the hand held lever to free distal ends of the umbrella arms, and a soft material umbrella roof which extends from the distal end of the hand held lever and over the umbrella arms and to free distal ends of the umbrella arms, the umbrella roof terminating at the free distal ends of the umbrella arms;

three or more hard poles with special appliances on <u>first</u> ends of the hard poles adapted for connection to <u>the free distal</u> ends of <u>the</u> umbrella arms of the hand held umbrella, the hard poles extending downward from <u>the</u> distal ends of the umbrella arms <u>to second ends configured</u> for contact with a supporting surface;

one or more soft light walls attached to the hard poles and extending downward from the umbrella roof at free distal ends of the umbrella arms and from the umbrella roof and between the hard poles to form an enclosure within the hard poles and with and under the umbrella roof, wherein the umbrella roof and one or more of the soft light walls form a substantially continuous enclosure or barrier supported by the hard poles and the hand held umbrella frame assembly and extending from the distal end of the hand held lever to the second ends of the hard poles.

11. (Cancelled).

- 12. (Withdrawn) The universal extra shade tent structure and hand held umbrella combination of claim 11 wherein the umbrella frame assembly further comprises a swivel block through which the hand held lever of the umbrella frame extends and is axially moveable to locate a segment of the hand held lever above the umbrella arms of the umbrella frame assembly.
- 13. (Currently Amended) The universal extra shade tent structure and hand held umbrella combination of claim 10 <u>further</u> comprising at least two soft light walls between each of the hard poles extending from the <u>free</u> distal ends of the umbrella arms.
- 14. (Currently Amended) The universal extra shade tent structure and hand held umbrella combination of claim 10 wherein the soft light walls extend between the hard poles and from the umbrella roof along an entire length of the hard poles to extend over substantially all of the area between the hard poles and from the umbrella roof to the second ends of the hard poles.
- 15. (Original) The universal extra shade tent structure and hand held umbrella combination of claim 10 wherein the hand held lever is detachable from the umbrella frame assembly.
- 16. (Original) The universal extra shade tent structure and hand held umbrella combination of claim 10 wherein each of the hard poles comprise two or more interconnected telescoping sections whereby a length of each of the hard poles can be changed.
- 17. (Original) The universal extra shade tent structure and hand held umbrella combination of claim 10 wherein the soft light walls are triangular in shape.
- 18. (Original) The universal extra shade tent structure and hand held umbrella combination of claim 10 wherein the soft light walls are rectangular in shape.
- 19. (Original) The universal extra shade tent structure and hand held umbrella combination of claim 10 wherein the hand held lever is comprised of two or more interconnected telescoping sections whereby a length of the hand held lever can be extended to an approximate length of the hard poles.

- 20. (Currently Amended) The universal extra shade tent structure and hand held umbrella combination of claim 10 further comprising an extension pole adapted for attachment to a distal end of the hand held lever to extend above the umbrella roof.
- 21. (Currently Amended) In combination, a universal extra shade tent structure and <u>a</u> hand held umbrella, comprising:

a hand held umbrella which has a frame assembly including a hand held lever with a handle and a plurality of umbrella arms which extend outwardly radially and downward from a distal end of the hand held lever which is spaced from the handle, each of the umbrella arms terminating at free distal ends at radial points from the distal end of the hand held lever, and a soft material umbrella roof which extends over the umbrella arms from the distal end of the hand held lever to each of the free distal ends of the umbrella arms;

the hand held lever further comprising two or more interconnected telescoping sections which extend from the handle to the distal end of the hand held lever, whereby a length of the hand held lever can be extended or shortened by relative movement of the interconnected telescoping sections;

three or more soft pulls connected to the free distal ends of the umbrella arms of the hand held umbrella, the soft pulls extendable downward from the free distal ends of the umbrella arms a distance greater than a length of the hand held lever, and an anchor at ends of each of the soft pulls.

22. (Currently Amended) The universal extra shade tent structure and hand held umbrella combination of claim 21 wherein the soft pulls are attached to and extend from the <u>free</u> distal ends of the umbrella arms which are located approximately ninety degrees apart on the umbrella frame assembly.
